

COMPANY ANNOUNCEMENT

Malta International Airport plc (the “Company”)

April Traffic Results

Date of Announcement	4 May 2021
Reference	347/2021
In terms of Chapter 5 of the Listing Rules	

QUOTE

Passenger traffic through Malta International Airport totalled 39,392 movements during the month of April. Representing a drop of 94% compared to the same month in 2019, this traffic result marked no significant improvement over previous months.

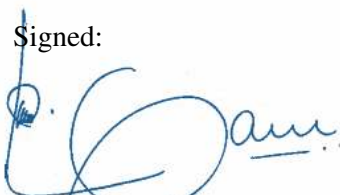

Malta International Airport’s top markets for the month were Italy, Germany, Turkey, France, and Bulgaria, with the United Kingdom remaining in the bottom half of the top 10 market table as a travel ban between the two countries remained in place.

In April, Airports Council International Europe published results for the first quarter of the year, which showed that traffic across European airports represented by the organisation had declined by 81.7% compared to the same three-month period in 2019.

The organisation also published a downgraded traffic forecast for European airports, which predicts that a full recovery to 2019 passenger volumes will be reached in 2025.
